

tum. If we fail to cope with the challenge, the other problems will pale into insignificance.

Introduction to "The Population Factor" section of Down to Earth by HRH Prince Philip, Duke of Edinburgh, 1988.

What has been described as the "balance of nature" is simply nature's system of self-limitation. Fertility and breeding

'Nicky' Arundel and the 'Get LaRouche' task force

The Hunt Country of Middleburg, Virginia is the home-away-from-home for many of the British elite. Modeled on the mansions of the English countryside, the huge estates are home to some of the wealthiest and most powerful American families. Middleburg residents welcomed the Duke and Duchess of Windsor in 1941, after he was forced to abdicate the throne for their unswerving allegiance to Adolf Hitler. Support for the Windsors' genocidal population policy is maintained today by numerous American members and financial activists in the 1001 Club and the World Wide Fund for Nature (WWF) who make Middleburg and the surrounding countryside their home.

Prominent in this apparatus is Arthur Windsor "Nicky" Arundel, a newspaper publisher and key member of the task force that railroaded Lyndon LaRouche into prison on trumped-up charges. Trained as a propaganda specialist for the CIA in Vietnam in the 1950s, Arundel used the *Loudoun Times-Mirror*, one of several Hunt Country weeklies owned by him, to retail phony "evidence" against LaRouche and to propagandize for his prosecution.

Arundel founded the African Wildlife Leadership Foundation, of Nairobi, Kenya and Washington, D.C. along with former OSS and CIA hand Kermit Roosevelt and WWF Chairman Russell Train, whose cousin, investment banker John Train, ran the New York salon that targeted LaRouche for prosecution.

The Arundel family's Wildcat Foundation funds the World Wide Fund for Nature and the International Union for the Conservation of Nature and Natural Resources. Arundel's sister Jocelyn Arundel Sladen, who was the IUCN liaison to the United States and an intimate of Sir Julian Huxley in the 1950s, is a member of its board of directors. Marjorie S. Arundel, the mother of Arthur and Jocelyn, was a member of the National Council of the World Wildlife Fund, according to its 1993 report.

success create the surpluses after allowing for the replacement of the losses. Predation, climatic variation, disease, starvation—and in the case of the inappropriately named *Homo sapiens*, wars and terrorism—are the principal means by which population numbers are kept under some sort of control.

Viewed dispassionately, it must be obvious that the world's human population has grown to such a size that it is threatening its own habitat; and it has already succeeded in causing the extinction of large numbers of wild plant and animal species. Some have simply been killed off. Others have quietly disappeared, as their habitats have been taken over or disturbed by human activities.

Humans are the greatest threat to survival

Interview with HRH Prince Philip, Duke of Edinburgh, in People Dec. 21, 1981 titled "Vanishing Breeds Worry Prince Philip, But Not as Much as Overpopulation."

Q: What do you consider the leading threat to the environment?

A: Human population growth is probably the single most serious long-term threat to survival. We're in for a major disaster if it isn't curbed—not just for the natural world, but for the human world. The more people there are, the more resources they'll consume, the more pollution they'll create, the more fighting they will do. We have no option. If it isn't controlled voluntarily, it will be controlled involuntarily by an increase in disease, starvation and war.

Address to the Joint Meeting of the All-Party Group on Population and Development and the All-Party Conservation Committee in London, March 11, 1987.

I do believe . . . that human population pressure—the sheer number of people on this planet—is the single most important cause of the degradation of the natural environment, of the progressive extinction of wild species of plants and animals, and of the destabilization of the world's climatic and atmospheric systems.

The simple fact is that the human population of the world is consuming natural renewable resources faster than it can regenerate, and the process of exploitation is causing even further damage. If this is already happening with a population of 4 billion, I ask you to imagine what things will be like when the population reaches 6 and then 10 billion. . . . All this has been made possible by the industrial revolution and the scientific explosion and it is spread around the world by the new economic religion of development.

Address at the Salford University Degree Ceremony, July 16, 1973.

There may be disagreements about the time scale, but in principle there can be little doubt that the population cannot go on increasing indefinitely. Resources presently being used will not last for ever and pollution in its broadest sense,
